

Search for Multi-quark Exotic States with Heavy Flavor at DZero Experiment

Wednesday, 4 October 2017 09:30 (15)

Recent results of the search for multi-quark exotic states with c- and b-quarks at DZero experiment (FNAL, USA) are presented in this talk. This includes an evidence of the possible tetraquark state $X(5568)$ decaying to $B_s \pi$ in the channels with hadronic and semileptonic decay of B_s meson and a search for the possible pentaquark states in $J/\psi \Lambda$ invariant mass spectrum.
