

Recent Charmonium results at BESIII

Wednesday, 4 October 2017 08:40 (15)

BESIII is operated at the Beijing electron positron collider (BEPCII), which reaches a peak luminosity of 1.0×10^{33} /cm²/s at the center-of mass energy of 3770 MeV. With the world's largest sample accumulated in the tau-charm region of e⁺e⁻ collision, the recent results for charmonium decays will be presented.
