

## **Rapid change of multiplicity fluctuations in system size dependence at SPS energies**

*Thursday, 5 October 2017 17:50 (20)*

Recent results on multiplicity fluctuations in p+p, Be+Be and Ar+Sc collisions from the NA61/SHINE collaboration will be presented. The scaled variance of charged hadron multiplicity changes little when going from p+p to Be+Be collisions and drops dramatically from Be+Be to Ar+Sc. The centrality selection procedure and the influence of volume fluctuations will be discussed. Comparison with the EPOS MC generator will be shown.
