

# Test of the electric charge conservation law with Borexino detector

*Tuesday, 6 October 2015 13:45 (15)*

The new limit on the electron lifetime is obtained from data of Borexino experiment. The expected signal from the  $e \rightarrow \gamma\nu$  decay mode is 256 keV photon detected in liquid scintillator. Because of extremely low radioactive background level in Borexino detector it was possible to improve the previous measurement by two orders of magnitude.

## **Presentation type**

Section talk (10+5 min)

**Primary author(s)** : Mrs. VISHNEVA, Alina (DLNP JINR)

**Presenter(s)** : Mrs. VISHNEVA, Alina (DLNP JINR)

**Session Classification** : Nuclear physics and particle physics - parallel II

**Track Classification** : Nuclear physics and particle physics
