## Unified model of primordial black holes and dark matter formation

Friday, 9 October 2015 14:30 (30)

We propose a unified model of primordial black holes and soliton dark matter formation. Dynamic of spherically symmetric clumps of scalar field is considered in Newtonian approximation. The formation of hidden mass of the Universe is discussed. Numerical solution of the system of interacting scalar and gravitational fields is used to obtain the mass of a clumps.

## Presentation type

Section talk (10+5 min)

Primary author(s): GROBOV, Alexey (NRNU MEPHI)
Co-author(s): Mr. DMITRIEV, Alexandr (NRNU MEPHI)

**Presenter(s):** GROBOV, Alexey (NRNU MEPhI) **Session Classification:** Poster session IV

Track Classification: Nuclear physics and particle physics
