

Recent Standard Model measurements

Wednesday, 7 October 2015 11:30 (30)

Recent results of Standard Model physics using 7 and 8 TeV data recorded by the CMS detector are reviewed. This overview includes studies of vector boson production, results on V+jets production with light and heavy flavours, multiboson measurements and anomalous couplings searches and also the latest results on jet production and properties. The most recent 13 TeV results are presented as well. The outlined results are compared to the prediction of the Standard Model.

Presentation type

Plenary (25+5 min)

Primary author(s) : Dr. DORDEVIC, Milos (CERN)

Presenter(s) : Dr. DORDEVIC, Milos (CERN)

Session Classification : Nuclear physics and particle physics - plenary IV

Track Classification : Nuclear physics and particle physics
