

Bottomonium(like) states at e+e- colliders

Wednesday, 7 October 2015 08:20 (20)

We discuss recent results on bottomonium(-like) states from e+e- colliders. In particular we consider measurements of total b-bbar cross section and cross sections for exclusive bottomonia + light hadrons processes in the region of the Upsilon(10860) and Upsilon(11020) resonances. We also report on the recent progress with the charged bottomonium-like states Zb(10610) and Zb(10650).

Presentation type

Plenary (25+5 min)

Primary author(s) : Dr. MIZUK, Roman (MEPhI)

Presenter(s) : Dr. MIZUK, Roman (MEPhI)

Session Classification : Nuclear physics and particle physics - plenary III

Track Classification : Nuclear physics and particle physics
