

Charm Baryon Spectroscopy

Tuesday, 6 October 2015 15:30 (10)

B-factories Belle and BaBar during its operation made not only measurements connected with B-meson decays but also numerous observation and measurements in charm physics. In particular, their results on charm baryon decays and spectroscopy have enlarged and enriched the current picture of heavy flavour hadrons. In this talk we overview current status of charm baryons and their excited states. We also discuss different theoretical interpretations of newly found states.

Presentation type

Section talk (10+5 min)

Primary author(s) : Dr. CHISTOV, Ruslan (ITEP, MEPHI)

Presenter(s) : Dr. CHISTOV, Ruslan (ITEP, MEPHI)

Session Classification : Nuclear physics and particle physics - parallel III

Track Classification : Nuclear physics and particle physics
