

# **New Results from Multi-quark Exotic States Searches at D0 Experiment**

*Friday, 26 October 2018 10:35 (15)*

Recent results from a search for multi-quark exotic states at DZero experiment (FNAL, USA) are presented in this talk. This includes the new data for possible tetraquark state  $X(5568)$  in the channels with semileptonic decays of  $B_s$  mesons. Also, result of the  $J/\psi \pi$  system analysis and evidence for exotic charged charmonium-like state  $Z_c(3900)$  in semi-inclusive weak decays of b-flavored hadrons are presented as well.
