Measurement of the $t \bar t H$ production

Tuesday, 23 October 2018 09:00 (20)

The top quark is the heaviest elementary particle in the Standard Model, and has an expected Yukawa coupling of order unity. The value of this coupling is a key ingredient to unravel the nature of the observed Higgs boson. The only known process which has a direct sensitivity to this coupling is the production of a Higgs boson in association with a top quark-pair $(t\bar{t}H)$. This talk will present an overview of the \sqrt{s} = 13 TeV $t\bar{t}H$ ATLAS analyses leading to the observation of this process.
