Review and Status of Neutrino Oscillation Studies from Long Baseline Accelerator Based Experiments

Thursday, 1 December 2022 16:30 (30)

A review and status of neutrino oscillations studies from long baseline accelerator based experiments will be presented. An emphasis will be placed on recent results from running experiments such as T2K and NOvA. In addition the status plus plans of future experiments DUNE and HyperK will also be discussed.

Primary author(s) : PAOLONE, Vittorio (University of Pittsburgh (US))

Presenter(s) : PAOLONE, Vittorio (University of Pittsburgh (US))

Session Classification : Plenary

Track Classification : Neutrino physics
