INT- contribution to form factors of $K^+ \to \mu^+\nu_\mu\gamma$ decay in OKA experiment

Wednesday, 30 November 2022 19:50 (15)

A new precise measurement of the vector and axial-vector form factors difference $F_V - F_A$ in the decay $K^+ \to \mu^+\nu_\mu\gamma$ is presented. About 145K events of $K^+ \to \mu^+\nu_\mu\gamma$ have been selected in OKA experiment. The result is $F_V - F_A = 0.135 \pm 0.017(stat) \pm 0.024(syst)$. The number of events is about 1.5 times higher and both errors are smaller than last published OKA result. The presented result is considered as preliminary.
