The NA64-mu experiment at the CERN SPS.

Wednesday, 30 November 2022 11:15 (15)

The NA64 experiment is a fixed-target experiment at the CERN SPS combining the active beam dump and missing energy techniques to search for rare events by colliding 100-150 GeV energy electron or muon beams onto an active target. The talk presents the muon part of the experiment. The NA64-mu looks for the muon ($g-2$) anomaly and light dark matter with the semi-visible dark photon channel. The present report shows the status of the experiment, the theoretical and experimental parts, and future goals
