## Pentaquarks Production in Weak Decays of Bottom Baryons

*Tuesday, 29 November 2022 17:10 (120)*

At present, production, properties, and decays of heavy baryons are intensively studied both experimentally and theoretically. The  $SU(3)$  flavor symmetry allows an existence of a large number of hidden charm pentaquark states which differ in their light quark content. Here, ratios of weak decay width of bottom baryons into a pentaquark and light meson are presented. The most interesting for experimental observation decays of bottom baryons are specified.
