Search for neutrinos from Supernovae on the LVD experiment.

Tuesday, 29 November 2022 17:10 (120)

The paper presents the methodology and analysis of experimental data obtained by a Large Volume Detector (LVD) located in the Gran Sasso Laboratory. For 30 years of the experiment, a large database has been collected, on the basis of which a limit has been set on the frequency of supernova explosions in the Galaxy.
