Asymmetric kink solutions of hyperbolically deformed model

Monday, 5 October 2020 19:45 (15)

We study some properties of kink solutions of a model with non-polynomial potential obtained by deforming the well-known ϕ^6 field model. We consider the excitation spectrum of the kink. We also discuss the properties of the 'kink+antikink' system as a whole that are not inherent to a solitary kink or antikink.
