

Commissioning of the Pair Spectrometer of the GlueX experiment

Tuesday, 11 October 2016 17:15 (15)

GlueX is the new experiment in Hall D at Jefferson Lab, which main main goal is to search for mesons with exotic quantum numbers using a beam of linearly polarized photons. The main goal of the pair spectrometer is to determine the photon beam flux and to measure beam polarization. The spectrometer reconstructs the energy of a photon by detecting the electron/positron pair produced by the photon in a thin converter. The pair spectrometer was successfully operated during the commissioning run in spring 2016. We present the design of the pair spectrometer and performance results.

Primary author(s) : Dr. SOMOV, Alex (Jefferson Lab)

Co-author(s) : Dr. TOLSTUKHIN, Ivan (Indiana University Bloomington); Dr. SOMOV, Sergey (NRNU MEPhI); Mr. BERDNIKOV, Vladimir (NRNU MEPhI)

Presenter(s) : Mr. BERDNIKOV, Vladimir (NRNU MEPhI)

Session Classification : Methods of experimental physics - parallel II

Track Classification : Methods of experimental physics
