The 2nd international conference on particle physics and astrophysics

Contribution ID : 311

Type : Plenary/section talk

## **Recent results from ATLAS experiment**

Monday, 10 October 2016 13:55 (30)

The 2nd LHC run has started in 2015 with a pp centre-of-mass collision energy of 13 TeV and ATLAS has taken more than 20 fb-1 of data at the new energy by 2016 summer. In this talk, an overview is given on the ATLAS data taking and the improvements made to the ATLAS experiment during the 2-year shutdown 2013/2014. Selected new results from the recent data analysis from ATLAS is also presented.
