

Hydrodynamic flow in heavy-ion collisions at RHIC and LHC

Friday, 14 October 2016 08:00 (30)

In ultrarelativistic collisions of heavy-ions at the RHIC and LHC colliders we have seen behaviour which can be interpreted as a formation of locally thermalised system which expands as a fluid. In this talk I will review this data, and what we have learned of the dissipative properties of the formed partonic matter based on it.
