

Charmonium: present and future

Monday, 10 October 2016 14:25 (30)

The recent experimental results on spectroscopy, decay and production of charmonium and charmoniumlike states obtained by Belle, BaBar, BES and LHCb experiments still require a consistent theoretical understanding. We present experimental status of charmonium physics including discussion of the new standard and exotic charmonium states. We also discuss the future perspectives of charmonium physics.
