During morphologic analysis of lymphoid cells, that is carried out for lymphoma diagnostics, a lot of errors occur as result of its complexity. Application of wavelet analysis technique based on computer microscopy in the course of separation of lymphoid cells from lymphocytes in order to decrease the number of those errors is considered. Efficiency of wavelet analysis for lymphoma diagnostics is shown.

Primary author(s) : Ms. MOZHENKOVA, Anna (Clinician); Mr. POLYAKOV, Evgeniy (postgraduate)

Presenter(s) : Ms. MOZHENKOVA, Anna (Clinician)

Session Classification : Poster session - VI

Track Classification : Methods of experimental physics
