

Development of anticoincidence system for “Signal” experiment

Tuesday, 11 October 2016 15:15 (30)

An information about development of an anticoincidence system for charge particle rejection in “Signal” experiment on a board of “Interhelioprobe” spacecraft are presented. A construction of a detector and components of scientific equipment are described. Initial tests of the scintillation detector, silicon photomultipliers and future plans of developing are discussed.
