Effective potentials in LLA for diverse non-renormalisable models in the large N limit

Thursday, 24 October 2024 18:24 (12)

The study of the effective potential for non-renormalisable (super)symmetric models leads to recurrence relations for the leading singularities. These relations can be transformed into generalised renormalization-group (RG) equation which can be analyzed in detail. In some special cases this equation can be solved exactly.
