Holographic model for color superconductivity in d-dimension

Thursday, 24 October 2024 17:24 (12)

We extend the notion of color superconductivity for d-dimension AdS spacetime to find the condition of N_c to give the general diquarks condensate in d-1 dimension boundary which only use the Einstein Maxwell gravity in d-dimension. We find the relation between N_c and number of dimension of AdS spacetime.
