Study of the beam energy dependence of anisotropic flow using the scaling relations.

Friday, 25 October 2024 09:15 (15)

Anisotropic flow measurements of produced particles in relativistic heavy-ion collisions play an essential role in the studies of transport properties of the strongly interacting matter. In this work we provide the results of the most comprehensive systematic study of the beam energy dependence of anisotropic flow based on existing data and discuss them using different scaling relations for azimuthal anisotropy.
