Statistics: $\sim 2M$

Track cuts:

- PDG ($\pi^\pm = \pm 211$, $K^\pm = \pm 321$, p (p -bar) = ± 2212)
- $|y| < 0.1$

Bin width for spectra: 50 MeV/c

Centrality was calculated using multiplicity.

Variation of T_{kin} with $\langle \beta \rangle$ for different centralities and energies

Simultaneous fit of the π^\pm , K^\pm , p , and \bar{p} spectra across all the BES energies.

Experimental results from: [Phys. Rev. C 96, 044904 \(2017\)](#)

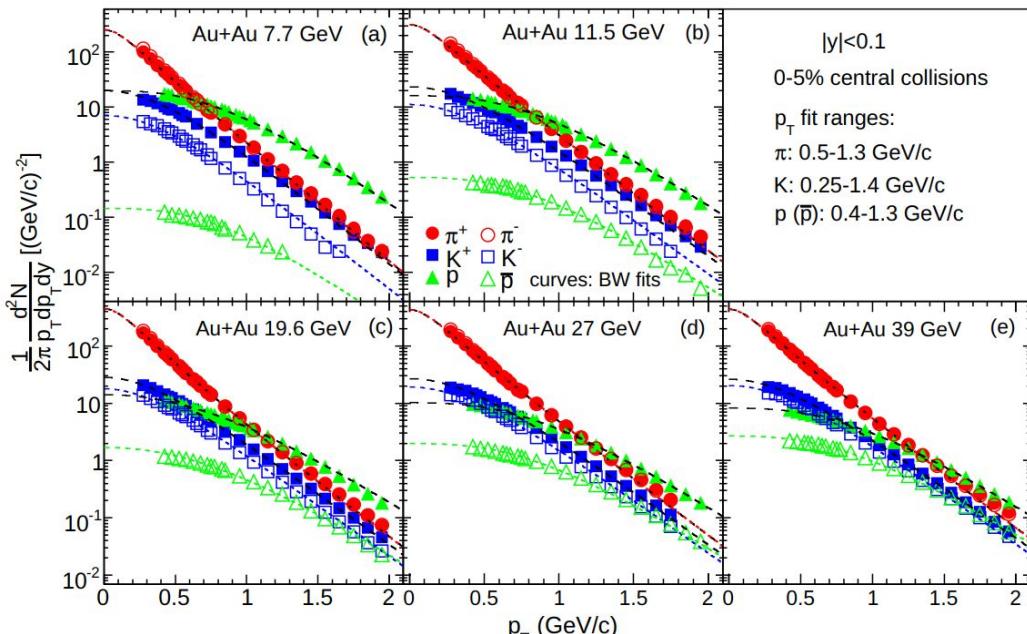

FIG. 36: (Color online) Blast wave model fits of π^\pm , K^\pm , p and \bar{p} p_T spectra in 0-5% central Au+Au collisions at $\sqrt{s_{\text{NN}}} =$ (a) 7.7 GeV, (b) 11.5 GeV, (c) 19.6 GeV, (d) 27 GeV, and (e) 39 GeV. Uncertainties on experimental data represent statistical and systematic uncertainties added in quadrature. Here, the uncertainties are smaller than the symbol size.

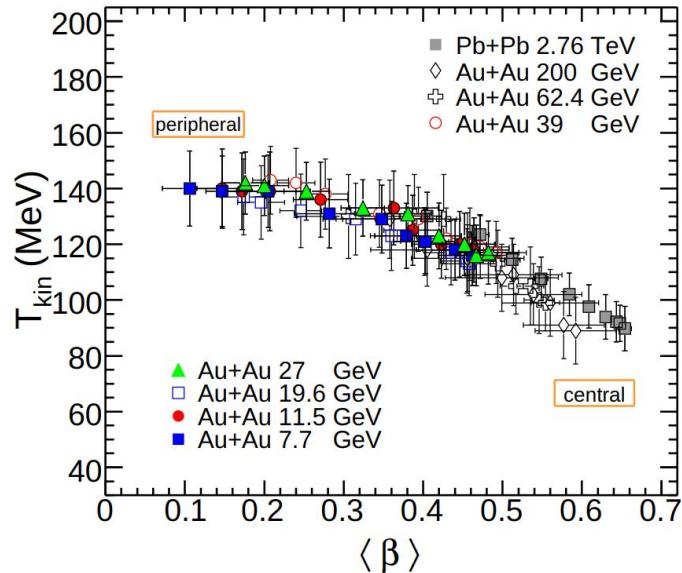

FIG. 37: (Color online) Variation of T_{kin} with $\langle \beta \rangle$ for different energies and centralities. The centrality increases from left to right for a given energy. The data points other than BES energies are taken from Refs. [43, 66]. Uncertainties represent systematic uncertainties.

Blast wave fit

$$\frac{dN}{p_T dp_T} \propto \int_0^R r dr m_T I_0 \left(\frac{p_T \sinh \rho(r)}{T_{\text{kin}}} \right) \\ \times K_1 \left(\frac{m_T \cosh \rho(r)}{T_{\text{kin}}} \right),$$

m_T - transverse mass

$\rho(r) = \tanh^{-1}(\beta)$

I_0, K_1 - Bessel functions

$\beta = 2 * \beta_s / (2+n)$

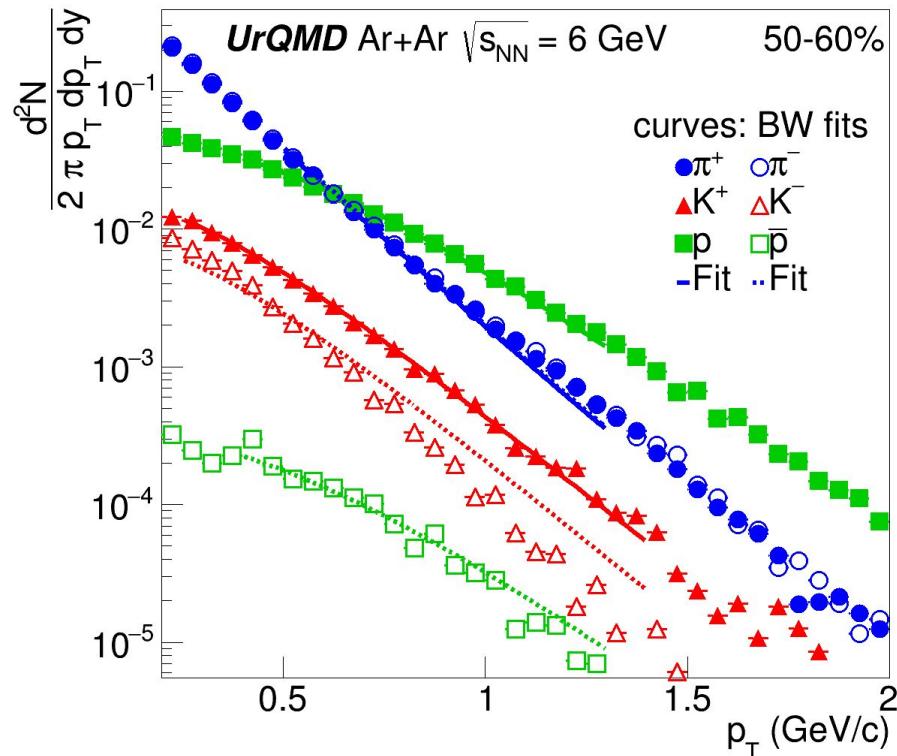

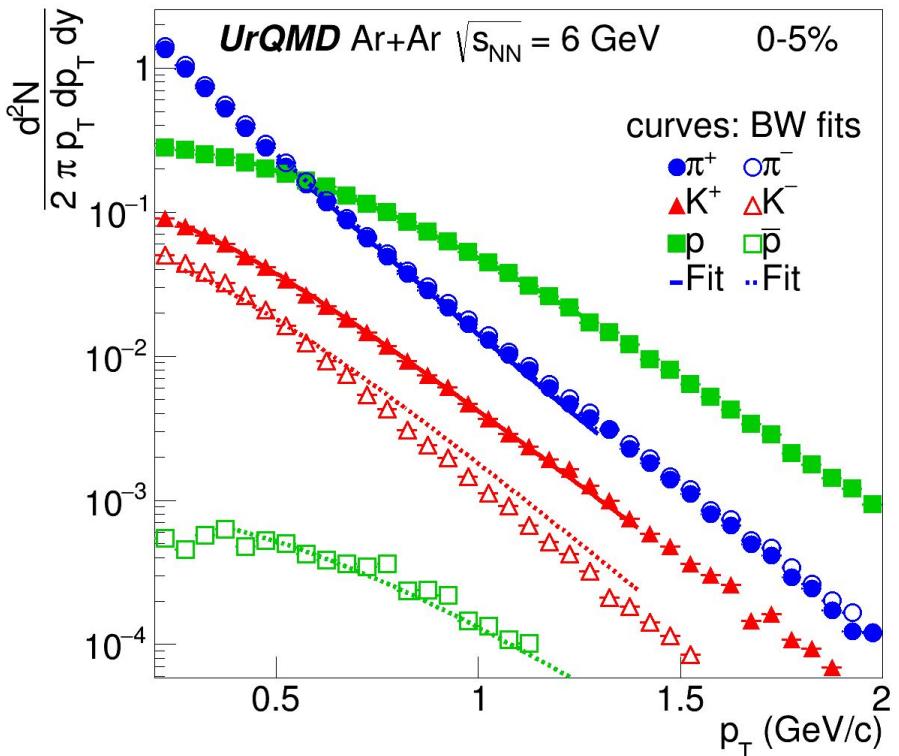

β_s - surface velocity

n - exponent of flow velocity profile

Fit parameters: T_{kin}, β

Comparison of UrQMD and Publish results: $T_{\text{kin}}(<\beta>)$

T_{kin} and $<\beta>$ underestimated for central collisions for Au+Au 19.6 GeV and KrKr 12 GeV after BW fit for π^\pm, K^\pm p_T spectra

Conclusion

- Spectra for the π^\pm , K^\pm , p and pBar were constructed using UrQMD
 - The spectra were fitted using the BlastWave (BW) model
 - Extracted fit parameters T_{kin} and $\langle\beta\rangle$ compared with published data from STAR:
 - BW fit for π^\pm , K^\pm , p and pBar underestimated T_{kin} and $\langle\beta\rangle$ except Ar+Ar and KrKr
 - BW fit for π^\pm , K^\pm underestimated T_{kin} and $\langle\beta\rangle$ for AuAu 19.6 GeV and KrKr 12 GeV in central collisions

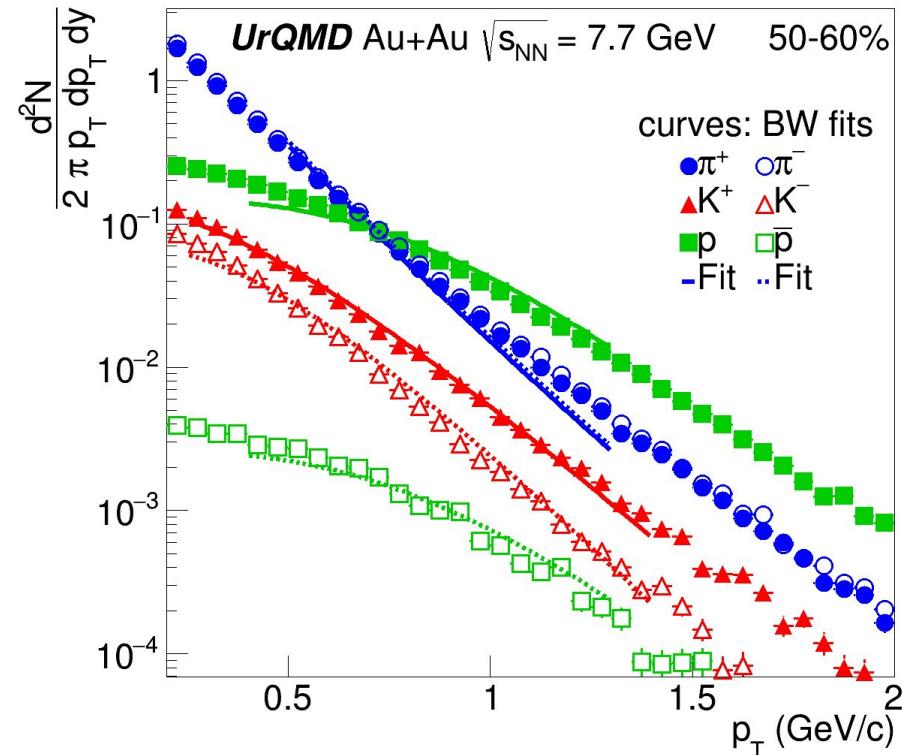

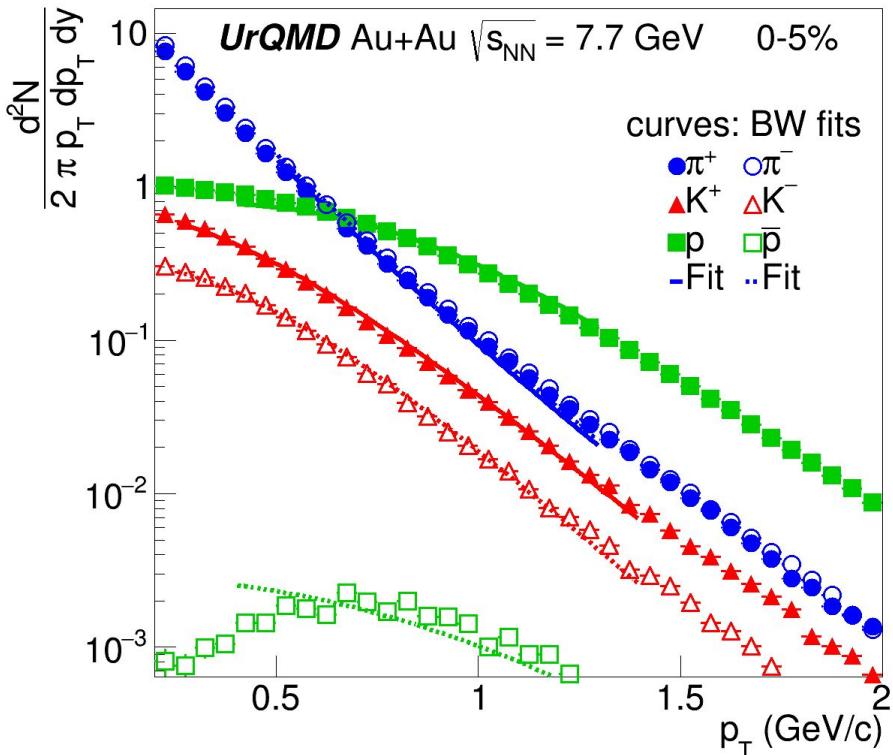

To do:

- BW fit of experimental data
