

Computing servers performance tests results

Computing servers tests were performed.
The servers that were under tests:

- lxui (JINR)
- CICC (JINR)
- lxui (MEPhI)
- pm19 server (MEPhI)
- se01 server (MEPhI)
- Local computing (unstable)

All tests were performed for Xe-Xe (most occupied) collisions. Y-axis represents the amount of time (in seconds) that 1 collision takes to be reconstructed.
